

Light up your life

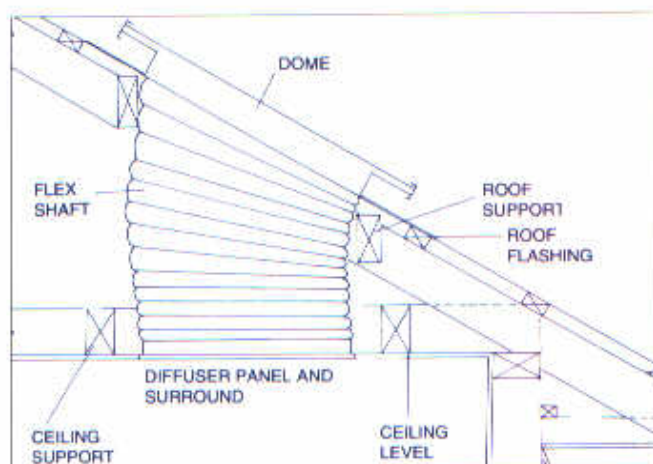

Statewide
SKYLIGHTS

THE SKYLIGHT ... What a bright idea

Skylights can add light, and ventilation without losing privacy, or taking up wall space. If you like having beams of sunlight splashing across your breakfast table, or you simply want to reduce your power bills, Statewide Skylights have a skylight to suit your needs. Statewide Skylights take special pride in service to customers. Our professionalism comes from many years of manufacture, distribution, installation and after sales support.

Skylights are the cost effective and attractive solution to add natural light. Statewide Skylights are available in either vented or non-vented models, use rugged Lexan Thermoclear® Polycarbonate, and are available in a size and style to suit you. The double skinned skylights provide astonishing strength, and the entrapped air between provides an insulating barrier as well as a sound barrier.

When you purchase a Statewide Skylight, you are buying a high quality and long lasting product that will enhance the beauty and elegantly match the design of your home. Statewide Skylights have a metal base to ensure weather-proof protection, and a ducted ultra reflective laminated flexible shaft. This duct is tailor-made, and fastened securely between your Statewide Skylight and ceiling diffuser.

Quality installation service.

Our qualified installation and advisory teams will help you select the position of your Statewide Skylight for maximum results. We manufacture a large size range and we have a style to suit the most discerning taste. All our skylights are available boxed in kit form for the D.I.Y. home owner, and builder clients Australia wide.

Special features...

- Energy saving
- A pure source of soft natural light
- Excellent durability
- Minimal maintenance
- Completely weather-proof
- Attractive design that subtly fits in with most decors

Statewide Skylights the versatile skylight ideal for ...Bathrooms, Kitchens, Lau

We'll show you what we're made of...

- **Energy Efficient** Lexan Thermoclear® traps air between layers of polycarbonate sheet. For example a 6mm sheet of Lexan Thermoclear® gives up to 40% greater efficiency over traditional glazing and gives an insulation value of 1.54.
- **High light transmission.** Lexan Thermoclear® sheet has approximately 98% the light transmission of normal glass and almost twice the light of opal domes
- **Light weight.** Lexan Thermoclear® sheet is around 70 times lighter than double walled glass
- **Excellent ventilation capabilities.** Ventilated units have been specially designed for bathrooms, laundries and toilets. These models give full ventilation, as well as providing natural light. In addition to this, the ventilated model can have an exhaust fan mounted in the ceiling diffuser or skylight dome.
- **Customised colour and sizing.** Our units can be manufactured out of Lysaght Colorbond® enabling you to choose from a wide range of available colours to suit your style of roofing. Dome tops can also be custom made to your requirements.
- **Impact resistant** Lexan Thermoclear® sheet is so tough it withstands the impact of a ball dropped from 7 feet onto a 6mm thick sheet without breakage. Lexan Thermoclear® sheet maintains its' impact properties at temperatures ranging 40°C-115°C.

Common questions about skylights.

Will there be a temperature increase when I have my skylight installed? There is no significant increase to temperature when an insulated Statewide Skylight is installed. This is because of the combined insulation effect of the double glazed polycarbonate skylight top, the air barrier in the light shaft and the design of the light diffuser at ceiling level.

What is the difference between Glozell and Clear Prismatic light Diffusers? The Glozell (ventilated) is an egg crate style diffuser, finishing the light shaft at ceiling level without obstructing the ventilation. Clear prismatic (unvented) diffusers consist of myriads of clear prisms which diffuse the light evenly over a wide area.

Glozell, Clear Prismatic and Lead Lighting diffusers. Lead Light available in limited designs.

What style of buildings are skylights best suited? Statewide Skylights are designed to give added light to the interior of virtually any building. Whether it's a home, office, factory, school or shopping centre Statewide Skylights have a style to suit you.

How weather proof are skylights? Provided the skylight is professionally installed, weatherproofing will stand up to the most severe storms. Correct sealing ensures long lasting weatherproof protection.

Many options. One standard.

Statewide Skylights make stylish designs to complement any home. The finish of the ceiling opening is a white powder coated tee-bar frame which houses the prismatic or glozell diffuser. This combination of materials gives our skylights a great look with a practical, highly functional design. The diffuser can be easily lifted for cleaning. All Statewide Skylights offer controlled natural light which will create a pleasant atmosphere in any room. The stylish appearance has proven to be extremely popular with home owners Australia wide.

The unique Statewide Skylight guarantee.

Statewide Skylights have qualified installation teams, and their workmanship and efficiency are guaranteed. We recommend that the unit be installed by our team of qualified installers or by a qualified tradesman. Standard Skylight components have a two year guarantee. All installations by the company have a 10 year written guarantee on workmanship.
